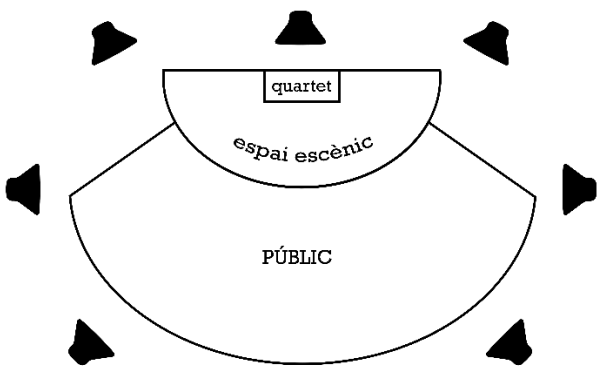
ELECTRONICS

Microphones : singer (headset) and instruments

Amplification : 8 loudspeakers + 2 subwoofers



Notas a la interpretación / *Notes to the performance*

General

Las alteraciones se mantienen hasta el final de cada compás - pero siempre solamente en la octava en la que aparecen. Pueden aparecer alteraciones redundantes, de recordatorio o de aclaración en aquellos casos en los que se ha considerado conveniente.

Accidentals stay valid until the end of each measure - but only for the octave where they appear.
Redundant, reminding or clarifying accidentals may appear where it has been considered convenient.

1/4, 3/4 sostenido
1/4, 3/4 sharp

1/4, 3/4 bemol
1/4, 3/4 flat

flecha=microalteración (1/8 tono aprox.)
arrow=microaccidental (1/8 tone circa)

(para la electrónica) : *cresc.* desde y *decresc.* hasta la nada (–∞ dB)

(for the electronics) : cresc. *from and* decresc. *to nothing (–∞ dB)*

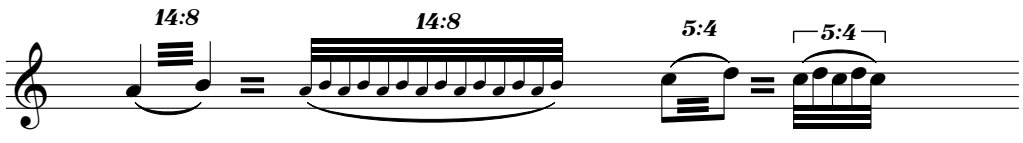
Crescendo y *diminuendo* exponenciales : el incremento o disminución de la dinámica no es lineal a lo largo de todo el regulador, sino que crece abruptamente en la última fracción (*crescendo*) o disminuye abruptamente en la primera fracción (*diminuendo*).

Exponential crescendo *and* diminuendo : *the increasing or decreasing of the dynamic is not lineal all along the line, but increases abruptly in the last segment* (crescendo) *or decreases abruptly in the first segment* (diminuendo).

dejar resonar */ let vibrate*

ensordecer (tapar) */ mute*

tapar parcialmente / *mute partially*



Canto / *Singing*

Melisma microtonal / *Microtonal melisma*

Esta escritura melismática microtonal tiene la finalidad de crear un canto en el que la altura esté siempre en (micro)movimiento, buscando una organicidad cercana a la del habla normal a la vez que sirviéndose de una aproximación lírica.
Vale la pena observar que la notación es sistemática y sin excepciones: cada frase o grupo se subdivide en subgrupos de 3 o 2 de notas, que configuran las partículas y que siguen una lógica de movimiento ascendente, descendente, o de "ida y vuelta".
Aquí se marcan con mayor tamaño las cabezas de las notas de las primeras notas de cada subgrupo, ya que la estructura de las frases en realidad se basa en estas primeras notas de las que se despliegan en cada una de ella un subgrupo. Se podría entender que la estructura fundamental de las frases son las notas iniciales de cada subgrupo y que los perfiles de variación microtonales indican cómo alterar ligeramente estas alturas en cada subgrupo,

The microtonally melismatic style written here has the goal to create a singing fashion in which the pitch always has a certain (micro)movement, in order to seek a certain organicity closed to the one of normal speaking while being performed from the approach of the lyrical singing.
It is important to note that this is applied following a systematic approach: in each phrase or group we find subgroups of 3 or 2 notes which function as particles and which draw a shape that moves upwards, downwards or "back-and-forth".
In the following example larger noteheads have been used to mark the first notes of each of those subgroups, for the structure of the phrases is actually made of these reference first notes from which the subgroup is formed. One could interpret that the fundamental structure of the phrases are symply just the very first notes of each subgroup, and that the microtonal variations actually display "how" should those first reference notes be slightly altered.

(notas guía para el estudio de la estructura melódica, para la interpretación los matices microtonales son igualmente prioritarios)
(guide notes for the study of the melodic structure; for the actual performance the microtonal nuances remain equally prioritary)

Clave IPA / *IPA Clef*

Se usa una "clave IPA" para indicar distintas posiciones bucales-vocales.

El tetragrama usado mantiene aun así la lógica diastemática de grave-abajo y agudo-arriba.

La modulación de frecuencia del sonido en [s] depende de la posición de vocal usada. **La línea inferior del pentagrama corresponde a una posición en [u] bien cerrada (máximo grave) y la línea superior a una posición en [i] bien estirada (máximo agudo)**, consiguiendo las frecuencias intermedias adpatando la posición bucal a las distintas posiciones intermedias de un cambio progresivo entre estos dos extremos [u] - [i].

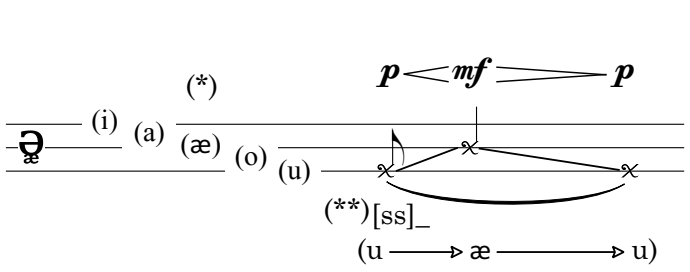
N.B.: la voz no debe emitir sonido "normal" (de cuerdas vocales).

The " IPA clef " is used to indicate the several different mouth-vowel positions.

The staff keeps working under the logic of the diastematy low-down and high-up.

The modulation of the frequency of the [s] sound depends on the vowel position applied. ***The lower line of the staff corresponds to the position of [u] ("ooo" in English) as the maximum low and the upper line of the staff corresponds to the [i] ("eee" in English) as the maximum high****, and every intermediate frequency is obtained by arranging the mouth position to the different intermediate steps between the continuous change from [u] to [i].*

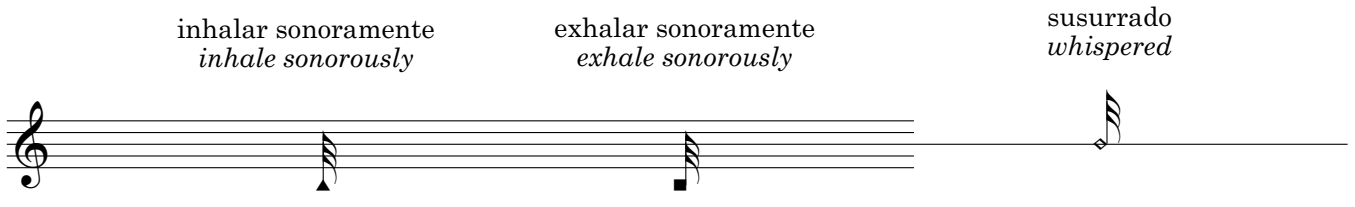
N.B.: *the voice must not produce "normal" sound (vocal chords' sound)*



(*) vocales IPA anotadas para orientación, notación aproximada
IPA vowels written as a guide, the notation is approximate

(**) [sch]_ [h]_ etc. (para esta obra, los sonidos consonantes han sido anotados para ser interpretados según su pronunciación en alemán)
(for this work, consonant sounds are indicated to be interpreted as pronounced in German)

Otros / *Others*

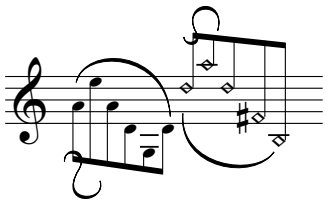


Cuerdas / *Strings*

Cabezas de notas "*suono vento*" : la mano izquierda debe apretar ligeramente la cuerda con una presión suave, similar a la usada cuando se pretende tapar ("mutear") la cuerda ; realizar esto en la altura donde se escribe la nota - siempre requerido conjuntamente al uso del *legno* para frotar la cuerda.
El sonido producido se puede pensar como el resultado de aplicar un filtro pasa-banda (estrecho y centrado en la frecuencia de la altura indicada) sobre ruido blanco.

"Suono vento" *noteheads : the left hand should depress slightly the string with a soft pressure, similar to that used when muting the string ; do this in the pitch of the written note - this is always required together with the use of the* legno *to rub the string. The produced sound can be thought as the result of applying a band-pass filter (thin and centered on the frequency of the indicated pitch) on white noise.*

Cabeza de nota para presión de armónico de mano izquierda.
Notehead for left hand harmonic pressure.

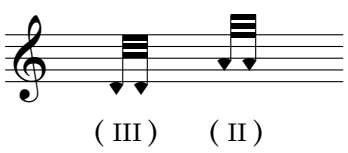


Los grupos de número no especificado de notas y adornados deben tocarse lo más rápido posible demtro priorizando la fluidez. La separación de los grupos y ligaduras coincide con los cambios de posición de la mano izquierda.

The adorned groups of not specified number of notes must be played as fast as possible within and as fluid as possible. Different beamed groups and separated slurs also mark the fingering position change.

Sobrepresión (del arco, con las crines); la cantidad de sobrepresión está indicada por el grosor de la figura

Overpressure (of the bow, with the crini*); the amount of pressure is indicated by the width of the figure*



Tocar la cuerda por detrás del puente

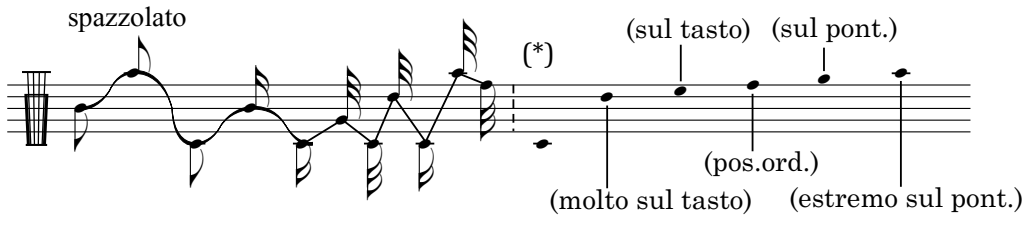
Play on the string, behind the bridge

“chicharra” : Sonido de "cigarras" : aplicar presión con la crin específicamente sobre el entorchado de la cuerda (detrás del puente)

"Cicada" sound : apply pressure with the crini specifically at the winding of the string (behind the bridge)

Clave de mástil y puente / *Fretboard-bridge clef*

Esta clave se usa para escribir el **desplazamiento longitudinal del arco sobre la cuerda** en el tramo que va **desde el puente hasta la finalización de la caja del instrumento**. Cuando se realiza esto con el ***legno*** del arco, **se obtiene un silbido que va de grave a agudo a medida que se desplaza del *tasto* al *ponte*** ; siendo así, la orientación de la clave de mástil sigue el mismo principio de diastematía inherente de la notación de alturas sobre el pentagrama con claves tradicionales, con **grave hacia abajo y agudo hacia arriba**.



This clef is used to notate the ***longitudinal movement of the bow on the string*** *within the section going* ***from the bridge until the end of the intrument's soundboard****. When using the* **legno***, a* ***whistling sound*** *is obtained, and* ***it goes from low to high when going from the tasto to the ponte*** *; thus the orientation of the fretboard clef follows the same principle of diastematy inherent in the notation of pitches in the staff with traditional clefs, having* ***low downward and high upward****.*

Fabià Santcovsky

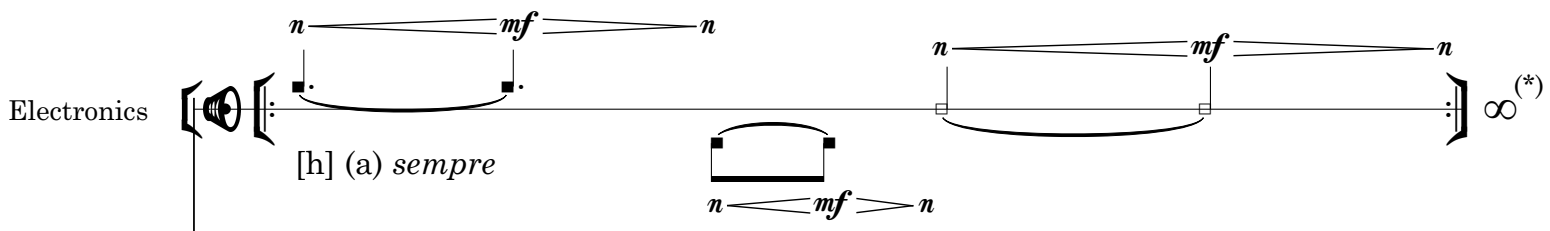
DESHERETARÀS LA TERRA

chamber opera

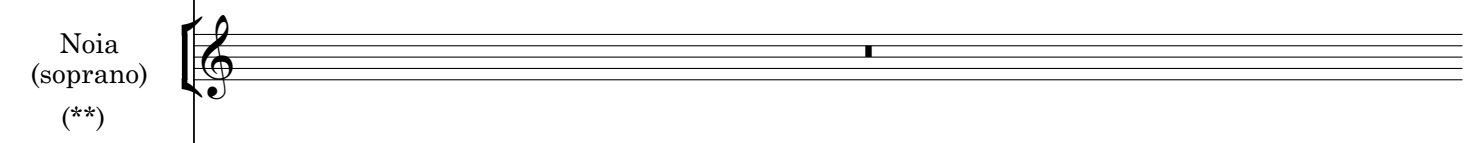
for soprano, string quartet & electronics

Durant l'entrada de públic, sonen alès exhalats (veu femenina) a través del sistema d'altaveus creant una polifonia on cada un d'aquests alès apareix i desapareix des d'un punt diferent de l'espai.
Quan la il·luminació comença a adaptar-se per a l'inici de l'obra i es va fent silenci en el mateix públic, també es van fonent aquests alès fins que es fa el silenci, donant pas a l'inici de la música.

As the audience starts entering the room, exhalation breathings (female voice) sound through the loudspeaker system creating a poliphony where each of the breaths appears and fades out from a different spot in the space.
As the lighting starts to change preparing the beginning of the performance and the audience goes silent, these breaths also keep fading away altogether until full silence is reached so that the music may begin.



(*) variations in rhythm, register (only slightly) and space position.



(**) la soprano va microfonada per a poder ser amplificada amb l'única finalitat d'equilibrar la seva presència en moments de desbalanç amb la resta del dispositiu, i sempre amb la intenció de preservar una sonoritat de qualitat acústica. L'amplificació a fer seria sempre en en una projecció al sistema d'altaveus que representin millor la seva ubicació escènica (generalment parlant: frontal central)

(**) *the soprano is to be microphoned so that it can be amplified with the only goal to balance her presence at times when needed to compensate a louder level from the rest of the device, and always to be done with the intent of keeping an acoustic quality to her sound. This amplification, if applied, is to be mapped to the loudspeakers' system in order to emulate her scenic position. (generally speaking: centered front)*

(*) Tractament de l'àudio en cascada/cadena, en aquest cas, primer l'harmonització per *time-stretch*, i aplicant l'harmonització per *pitch-shift* a tot el resultat previ (es podria dir que es produeix una harmonització final de 3 x 3 = 9 veus).
N.B.: la variança de tempo en el primer processament per *time-stretch* forma part intencionada del resultat.

(*) *Audio treatment in "cascade" mode, in this case, applying the first harmonization via time-stretch and later applying the pitch-shift to the whole previous result (namely, producing a final harmonization of 3 x 3 = 9 voices)*
N.B.: the tempo deviation on the first processing caused by time-stretch is intentionally intended as a result.
